Deployment Evidence (Screenshots)

Cloud Computing (SE-490) CEA — AWS ap-south-1

Source code: `https://github.com/nabeedjamshedali/Axon`

All screenshots were captured by browser automation from the AWS console (account Nabeed, Mumbai region) and GitHub.

Network / VPC configuration and subnets

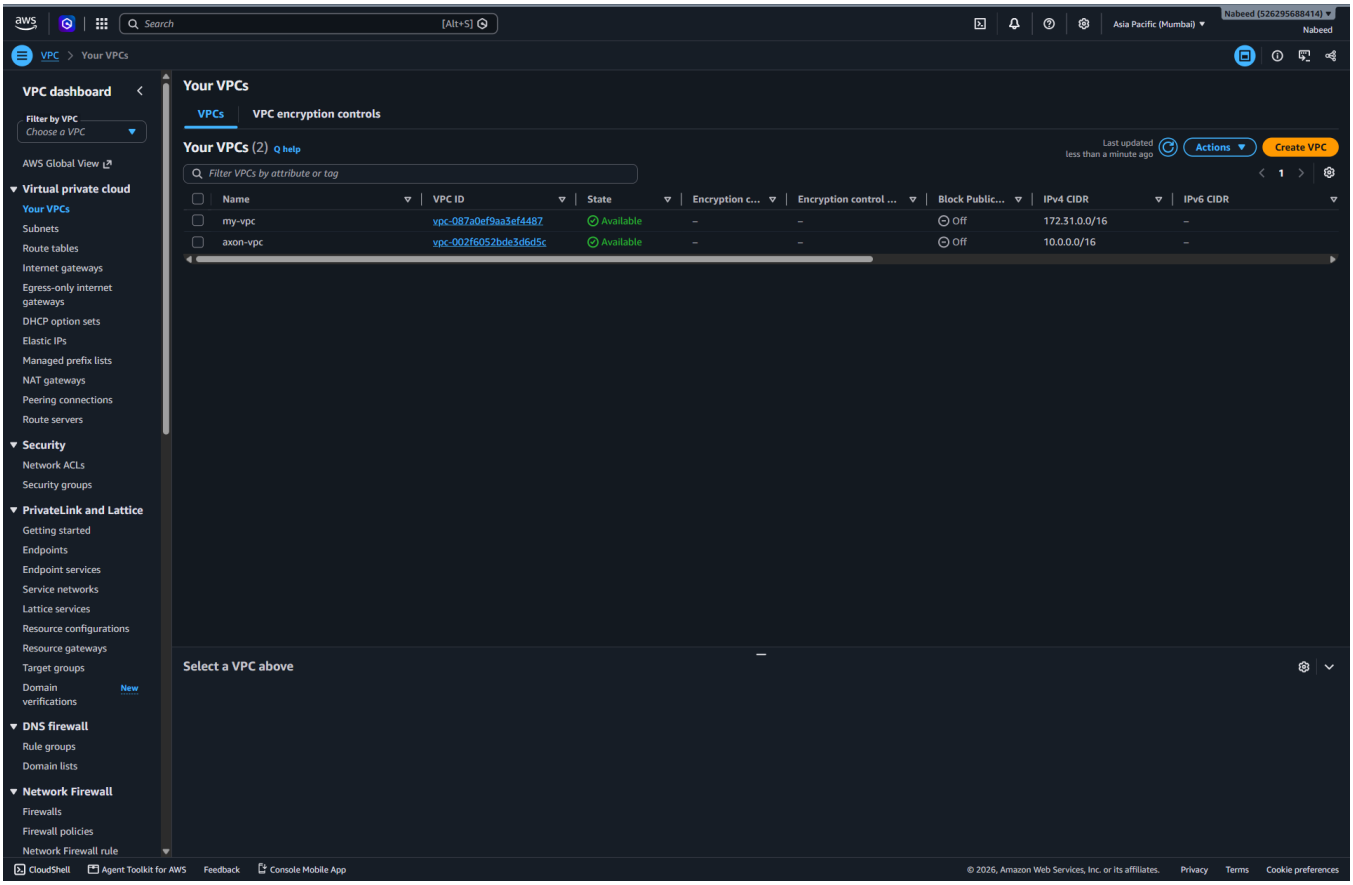

Figure 1: VPC `axon-vpc` (10.0.0.0/16) in ap-south-1.

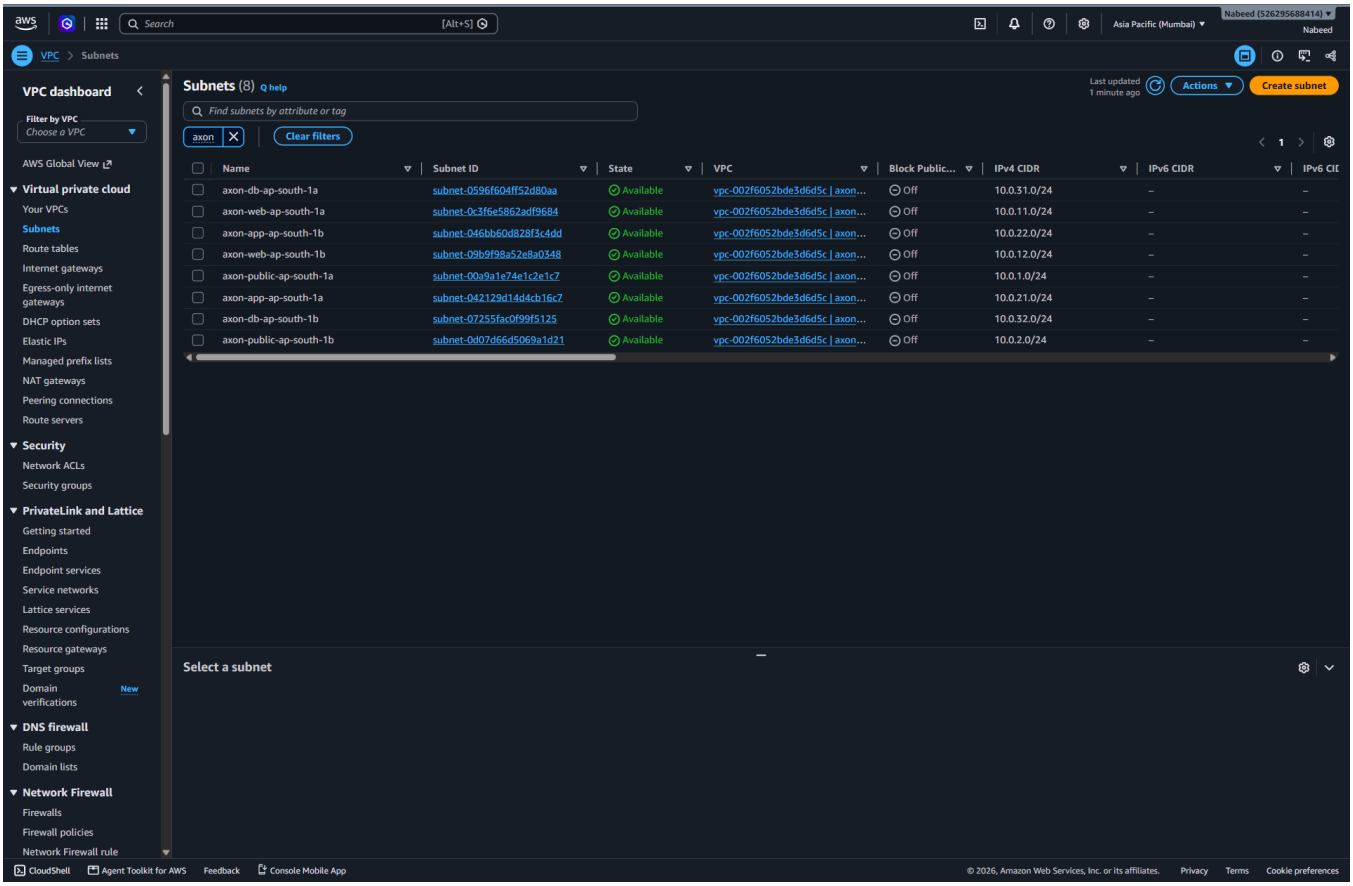

Figure 2: Eight subnets across two AZs: public, web, app and DB tiers.

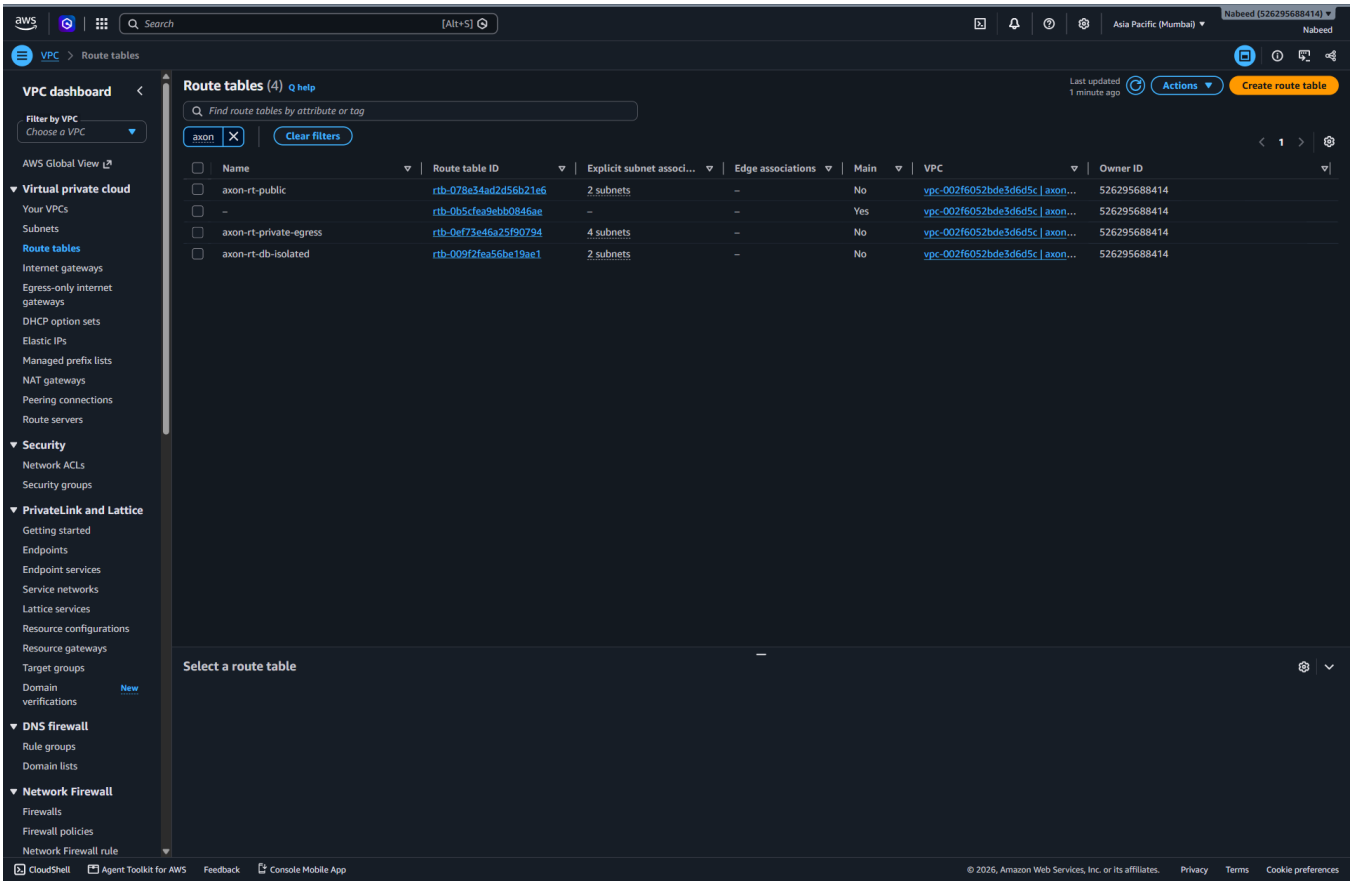

Figure 3: Route tables: public (IGW), private egress (NAT) and isolated DB table.

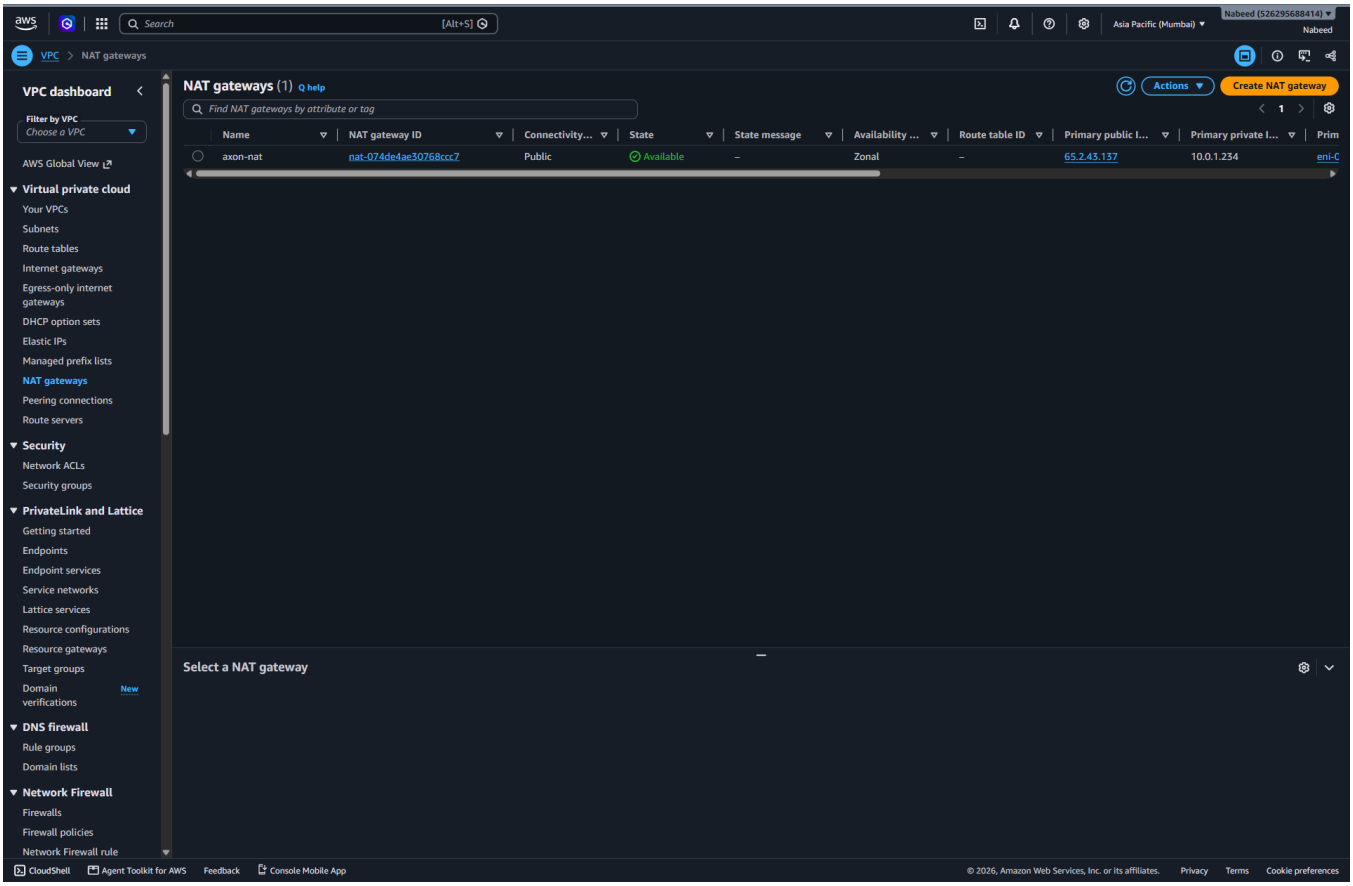

Figure 4: NAT gateway in a public subnet.

Compute instances / container hosts

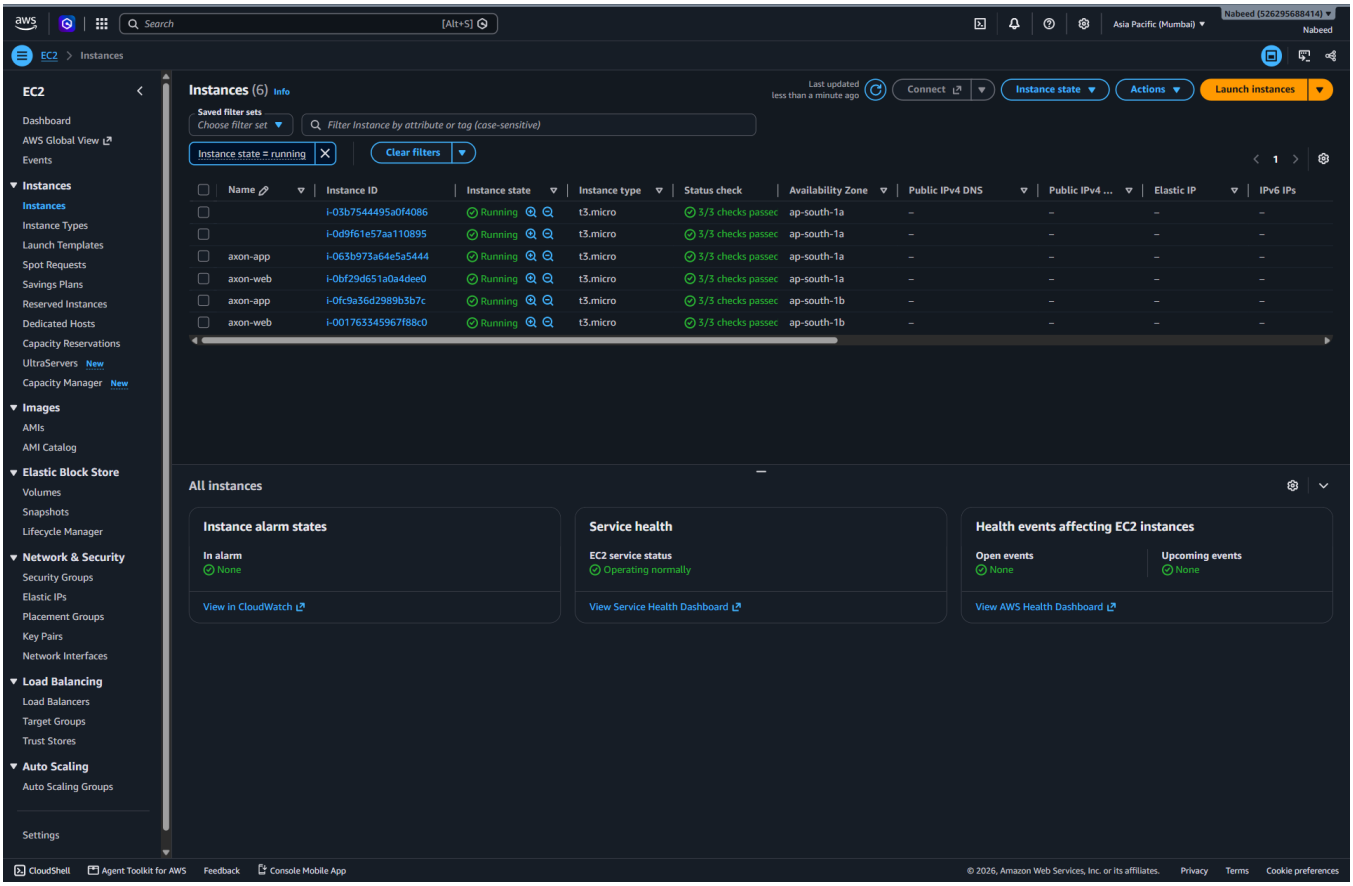

Figure 5: Running web-tier and app-tier instances.

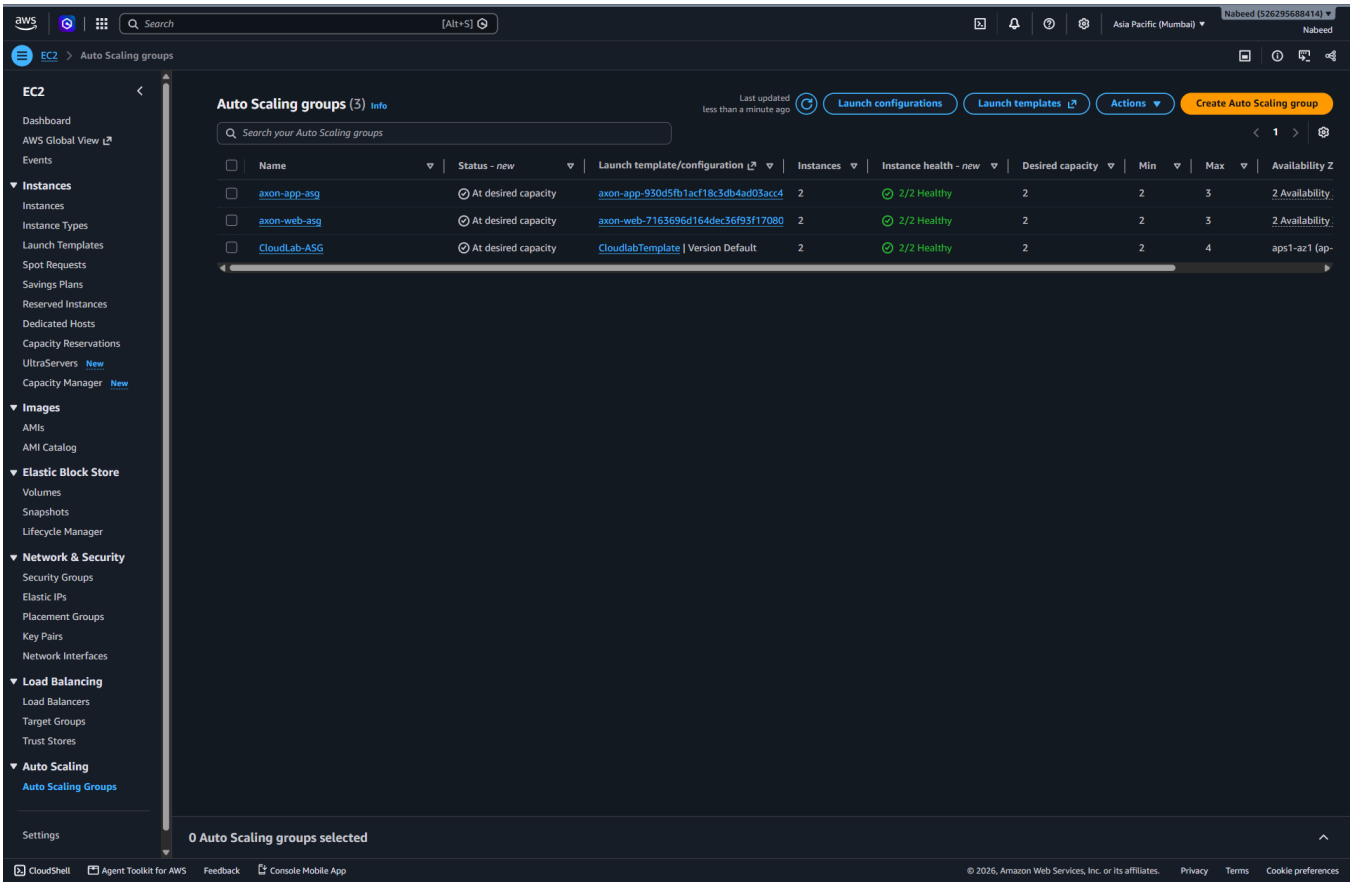

Figure 6: Auto Scaling groups for the web and app tiers.

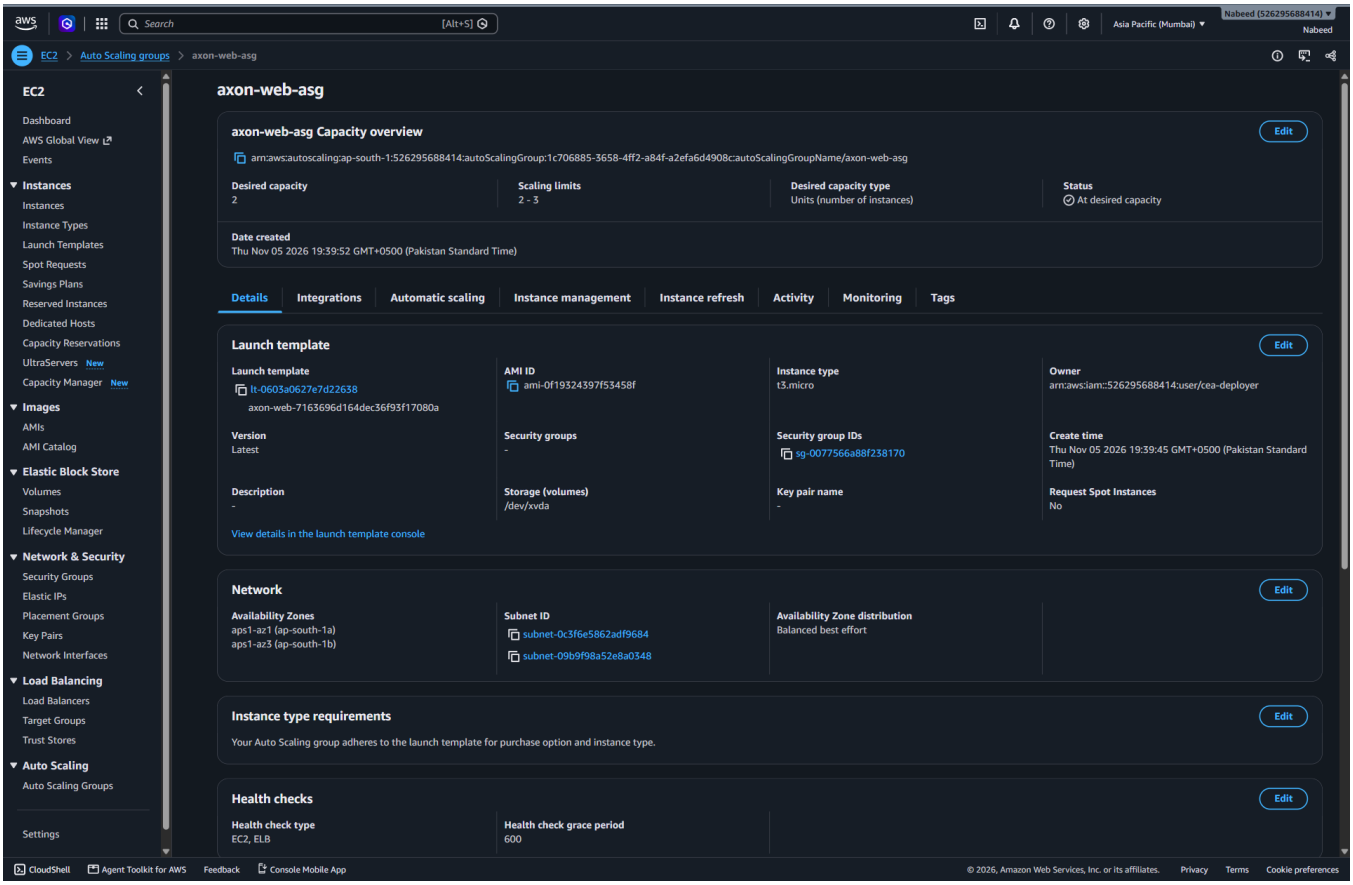

Figure 7: Web ASG details: capacity, launch template and target group.

Security groups / firewall rules

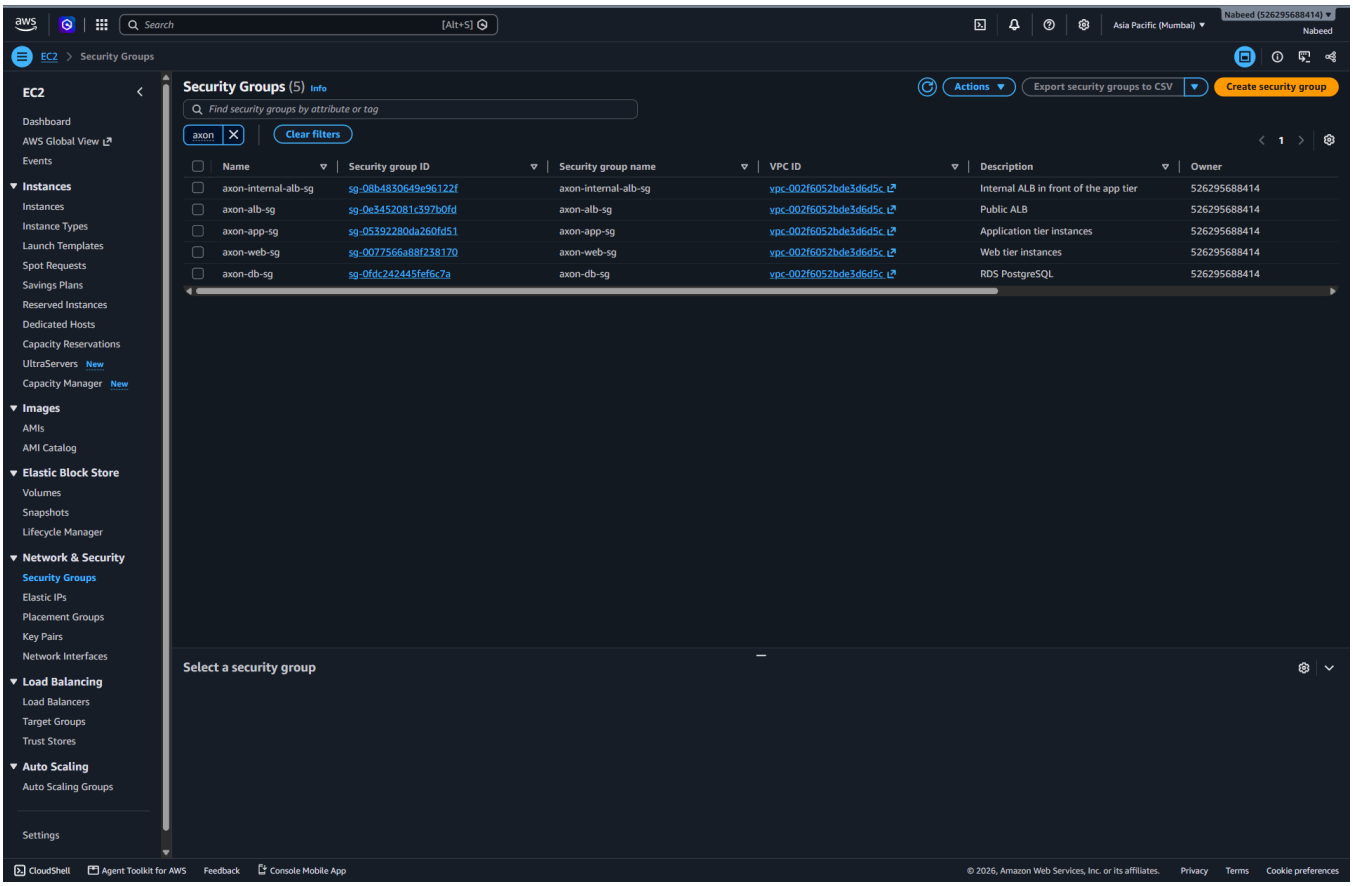

Figure 8: One security group per tier.

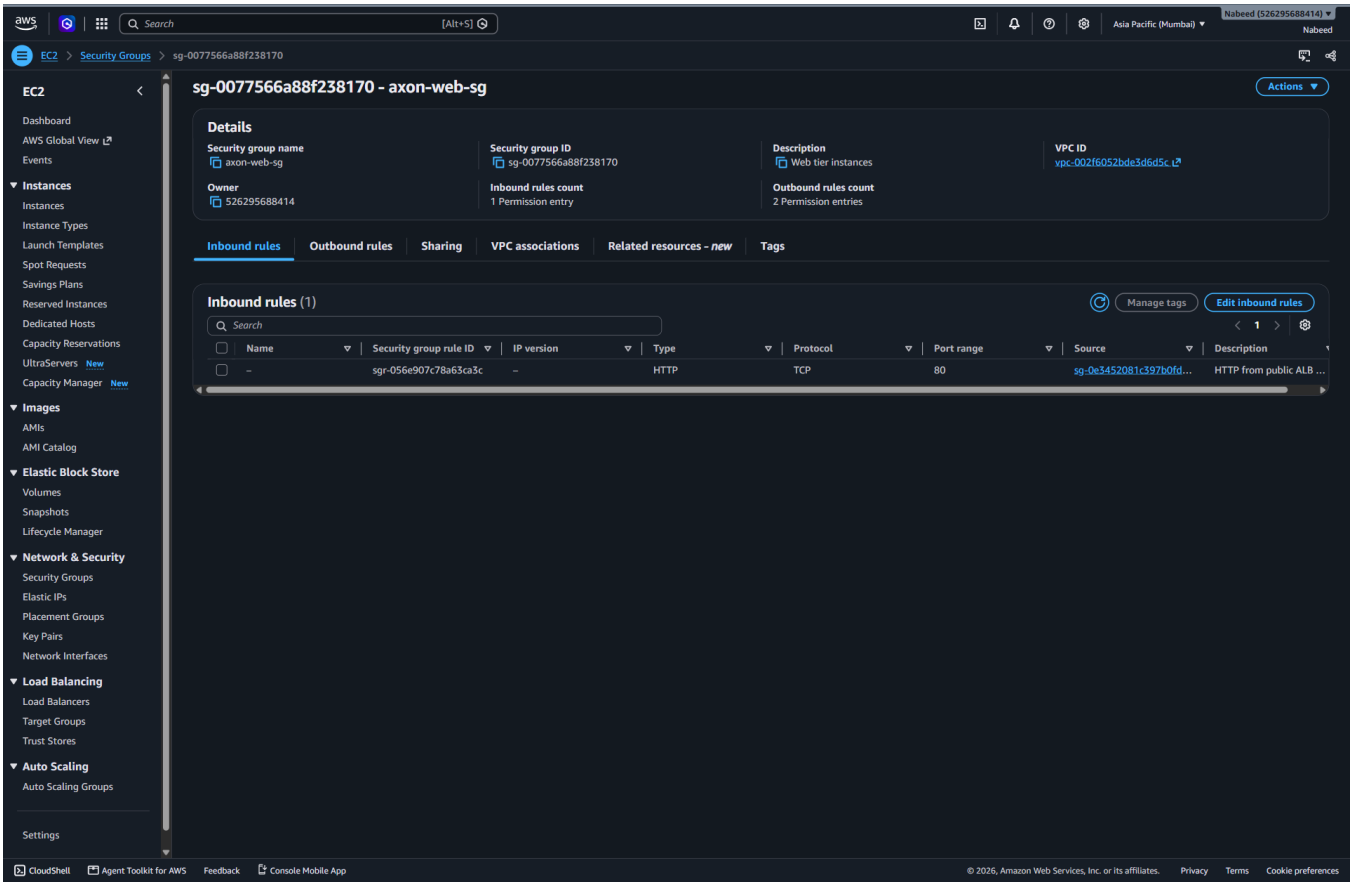

Figure 9: Web tier: inbound HTTP only from the public ALB security group.

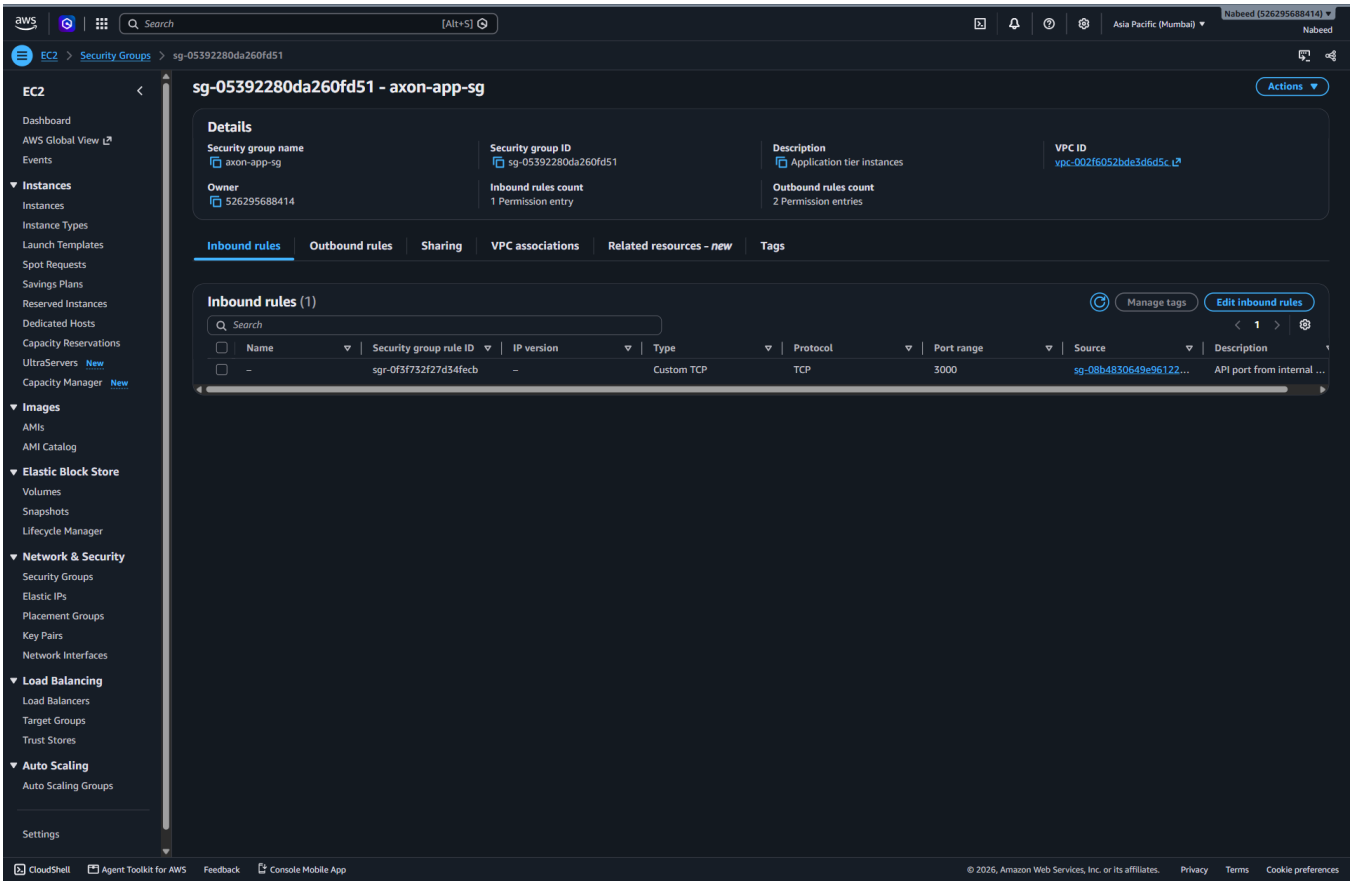

Figure 10: App tier: inbound 3000 only from the internal ALB security group.

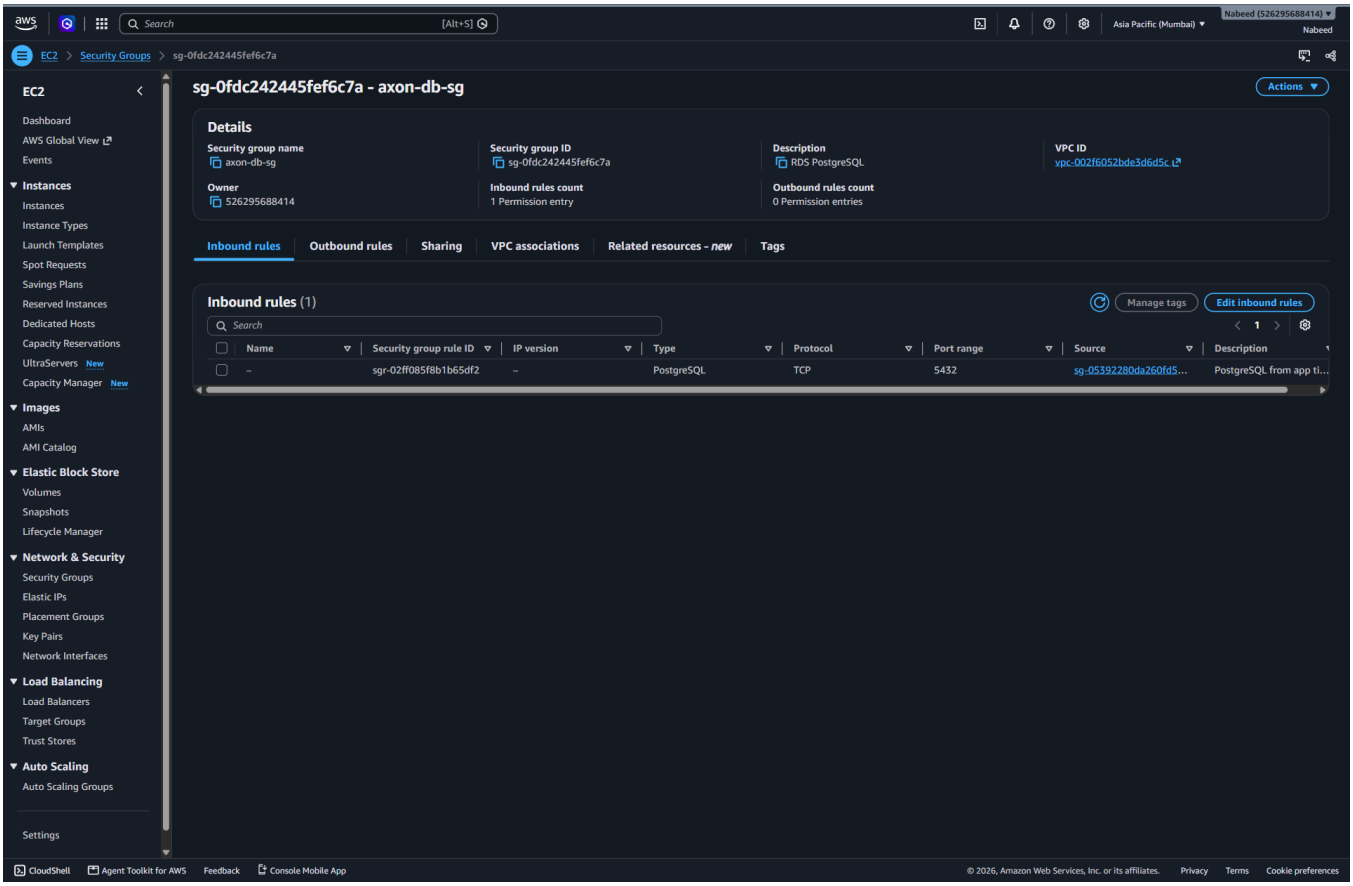

Figure 11: DB tier: inbound 5432 only from the app tier security group.

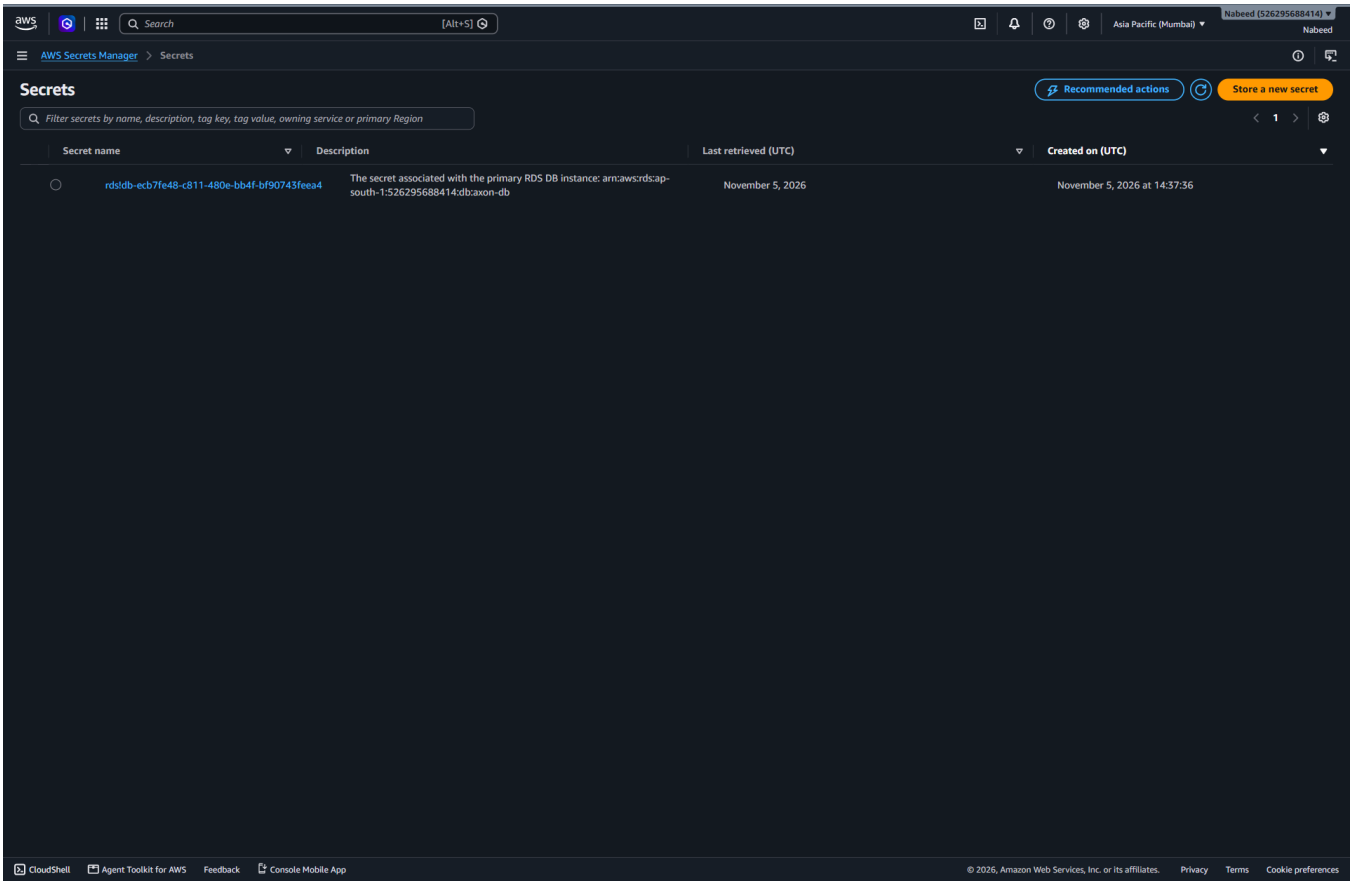

Figure 12: Secrets Manager holds the RDS-managed database credential.

Load balancer configuration

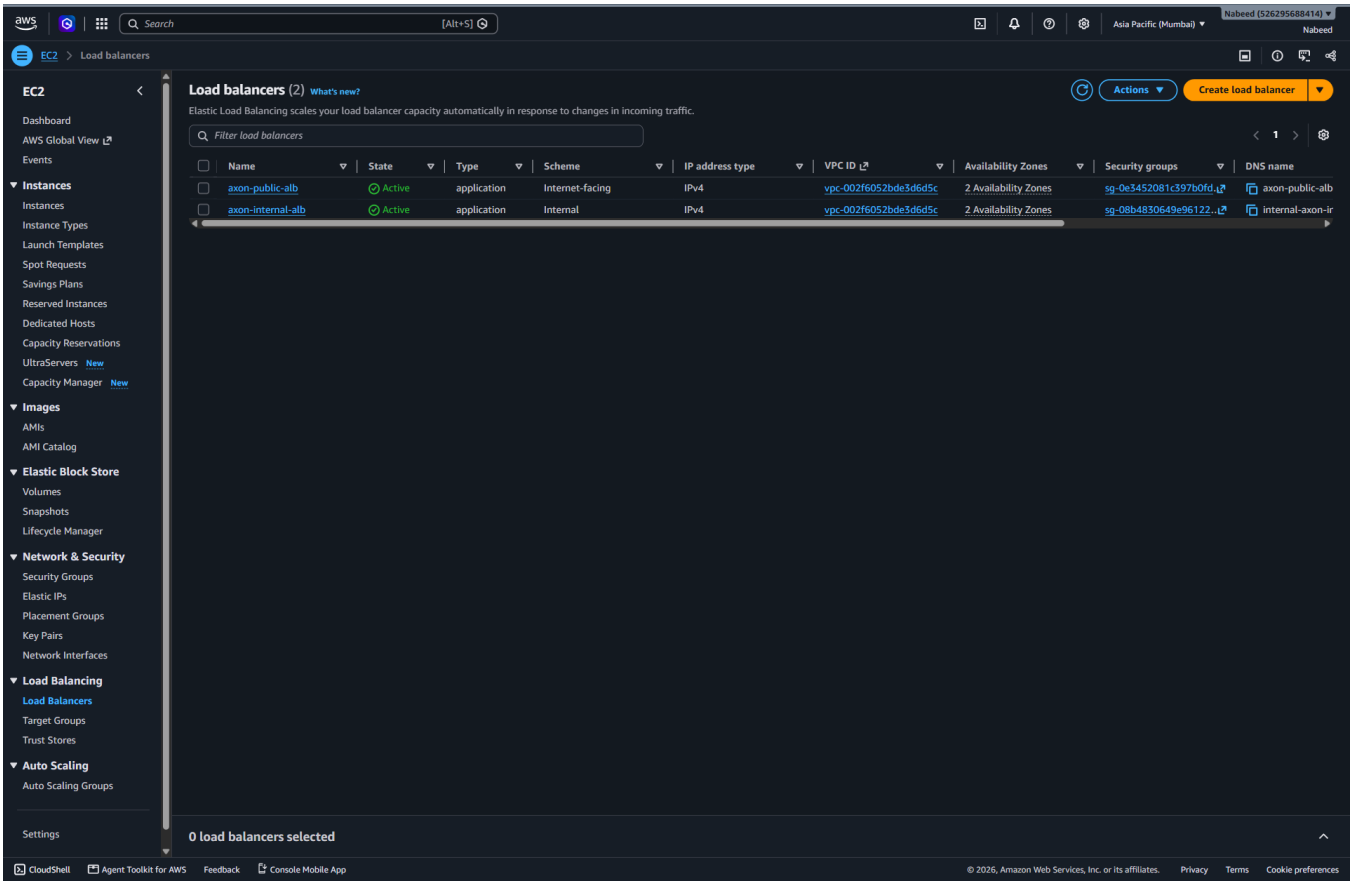

Figure 13: Public and internal Application Load Balancers.

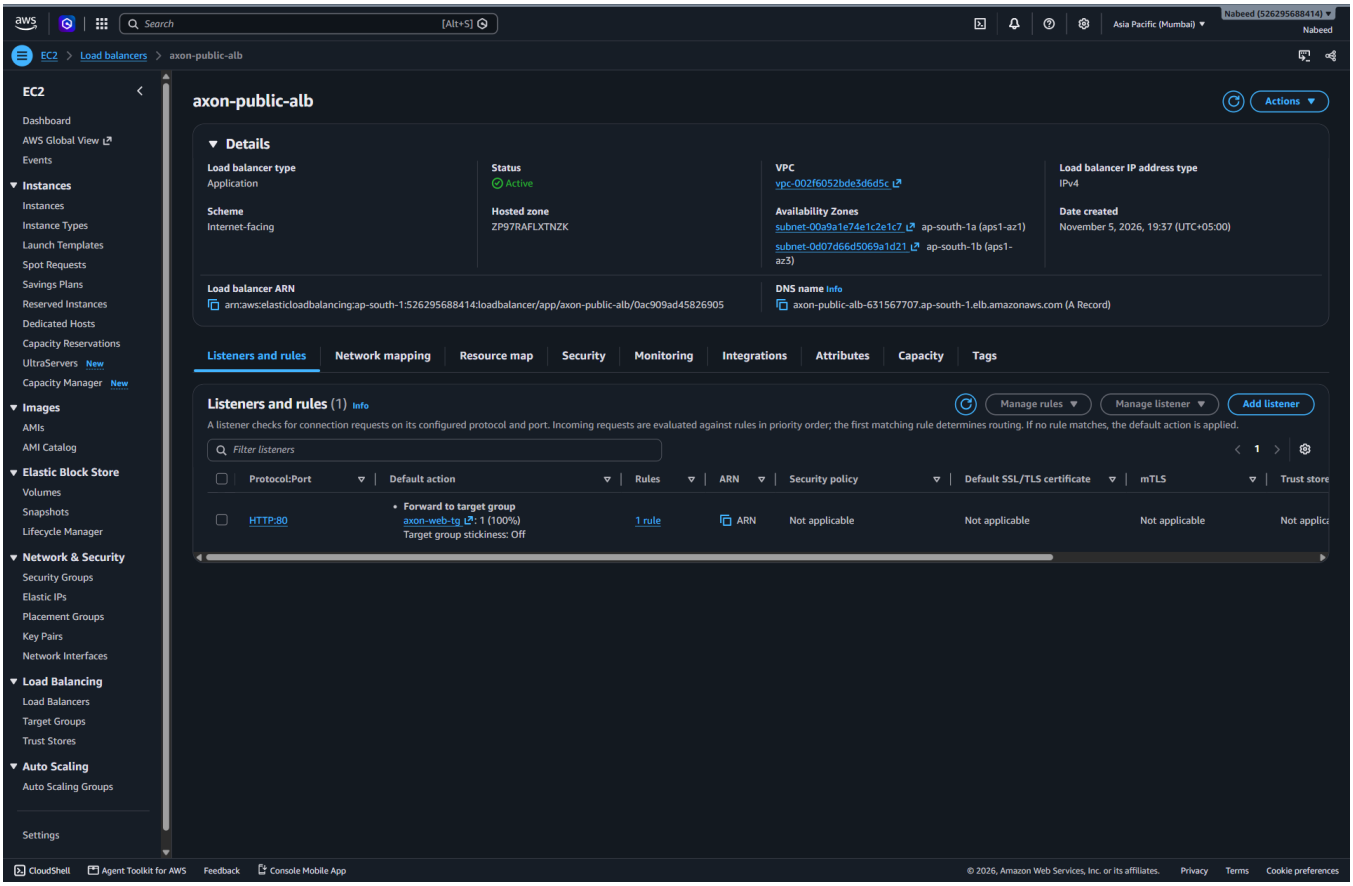

Figure 14: Public ALB detail: listener, subnets, security group.

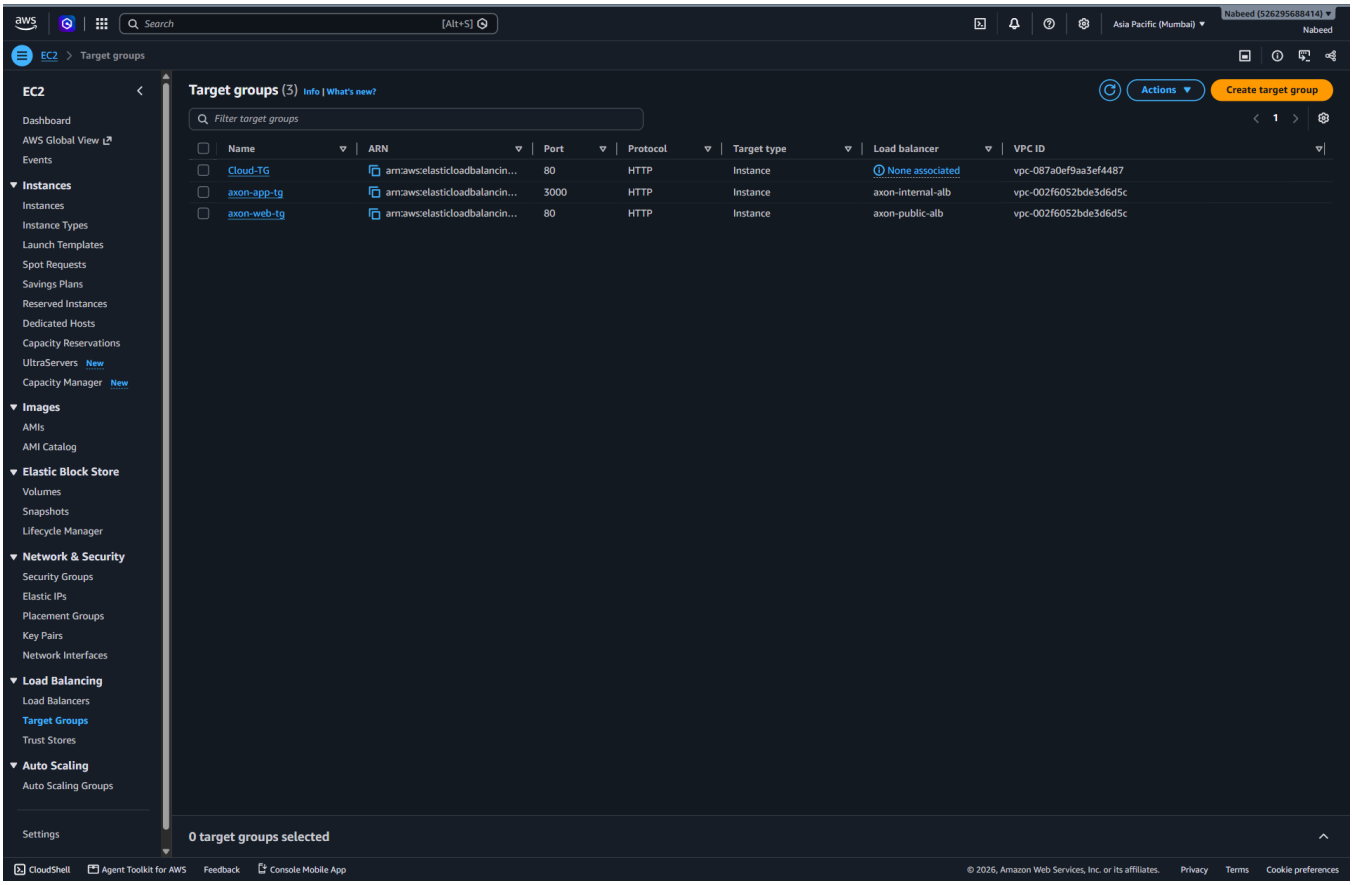

Figure 15: Target groups (web :80, app :3000) with healthy targets.

Database instance

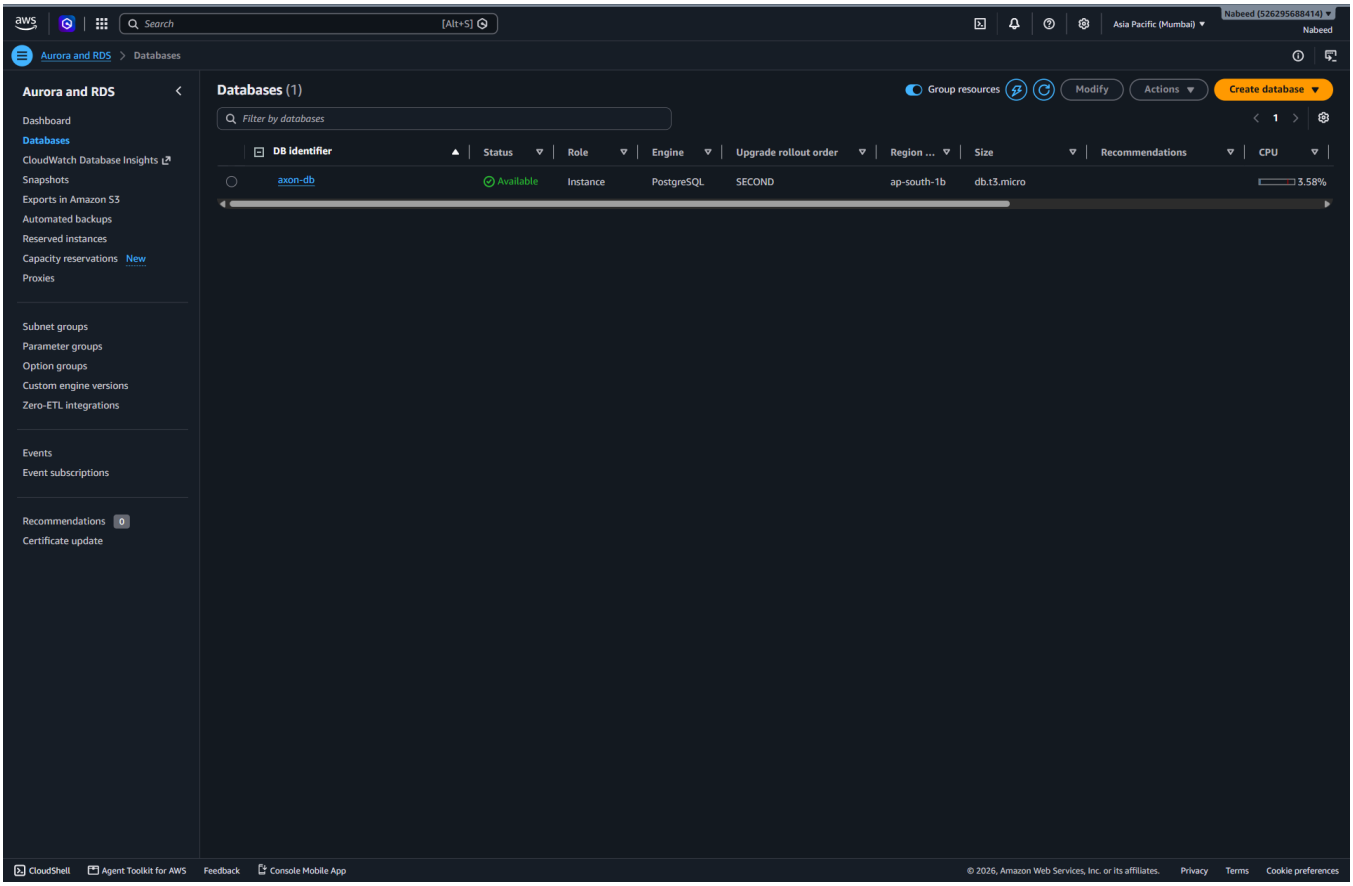

Figure 16: RDS PostgreSQL instance `axon-db` (available).

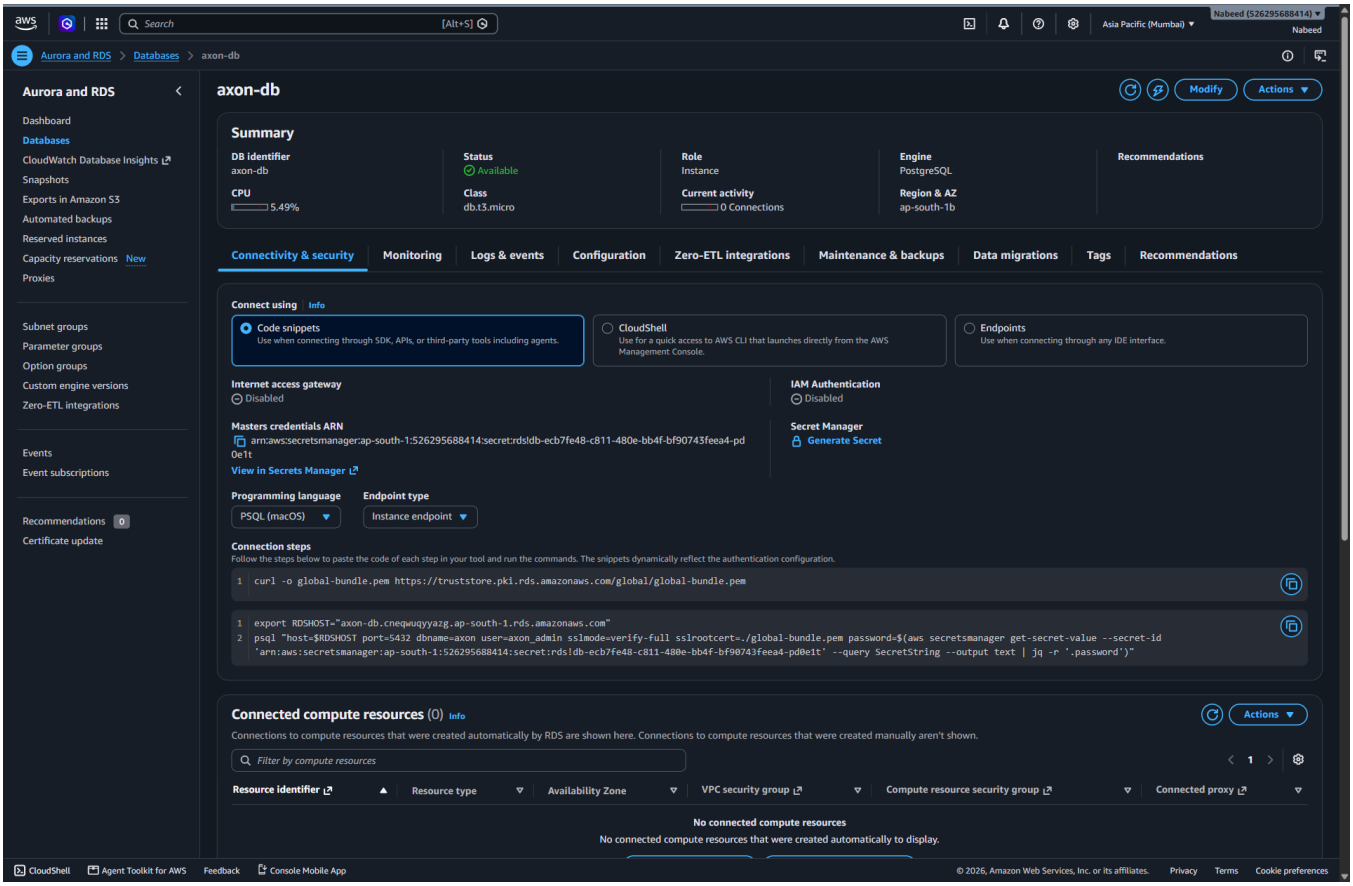

Figure 17: RDS detail: private, not publicly accessible, VPC security group.

Docker image build and registry listing

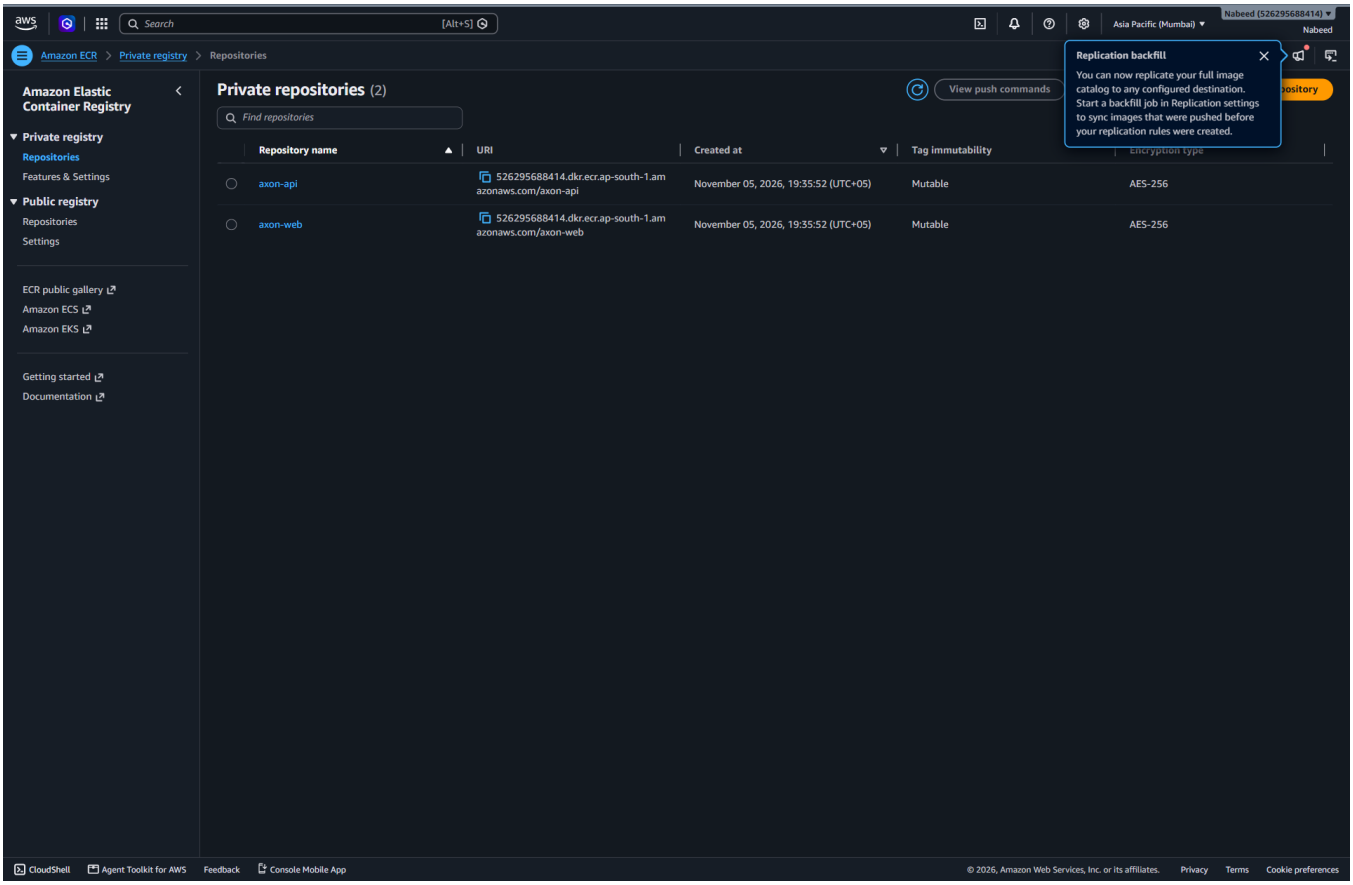

Figure 18: Amazon ECR repositories.

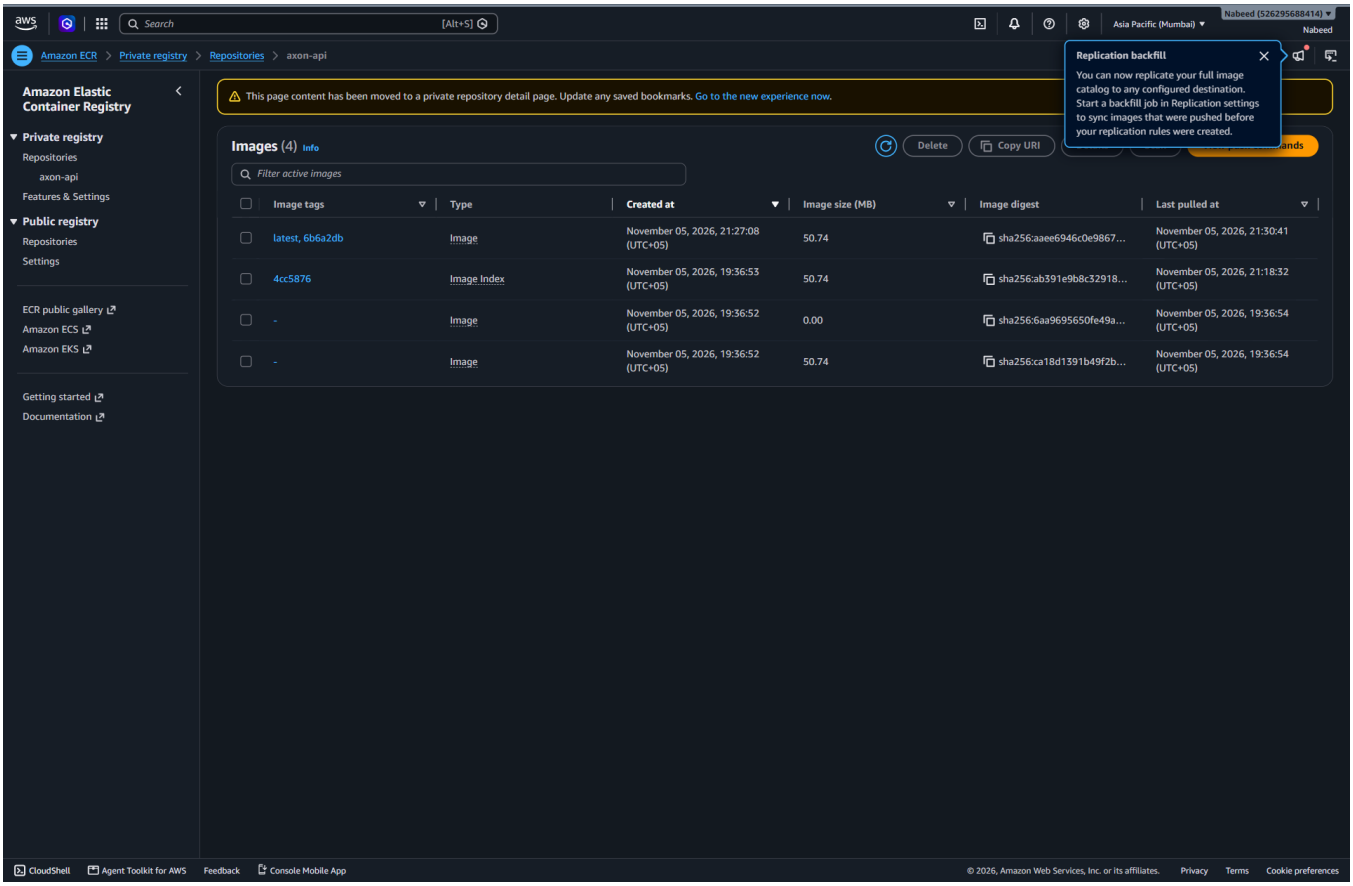

Figure 19: API images tagged with commit SHA and latest.

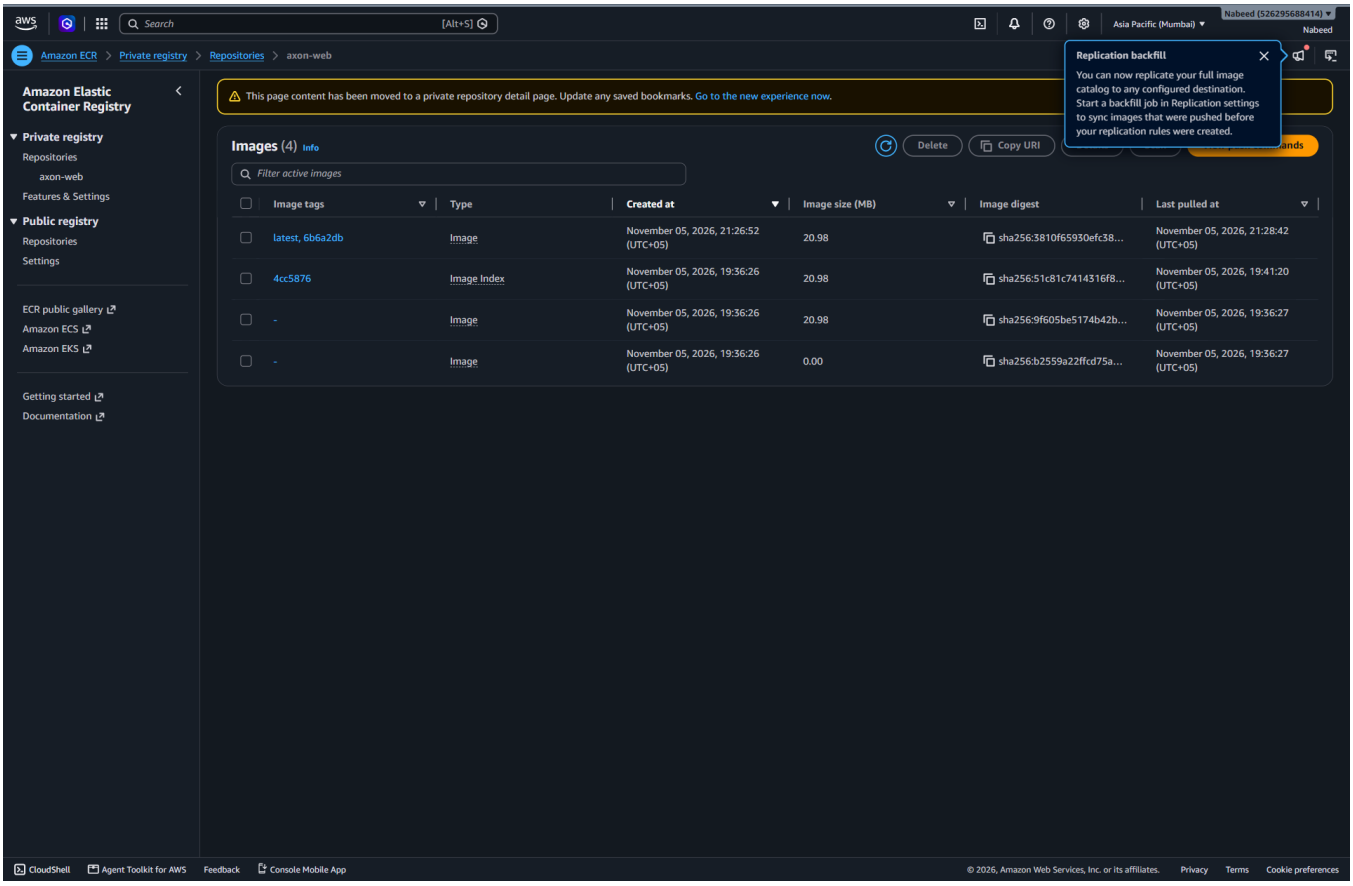

Figure 20: Web images tagged with commit SHA and latest.

CI/CD pipeline run

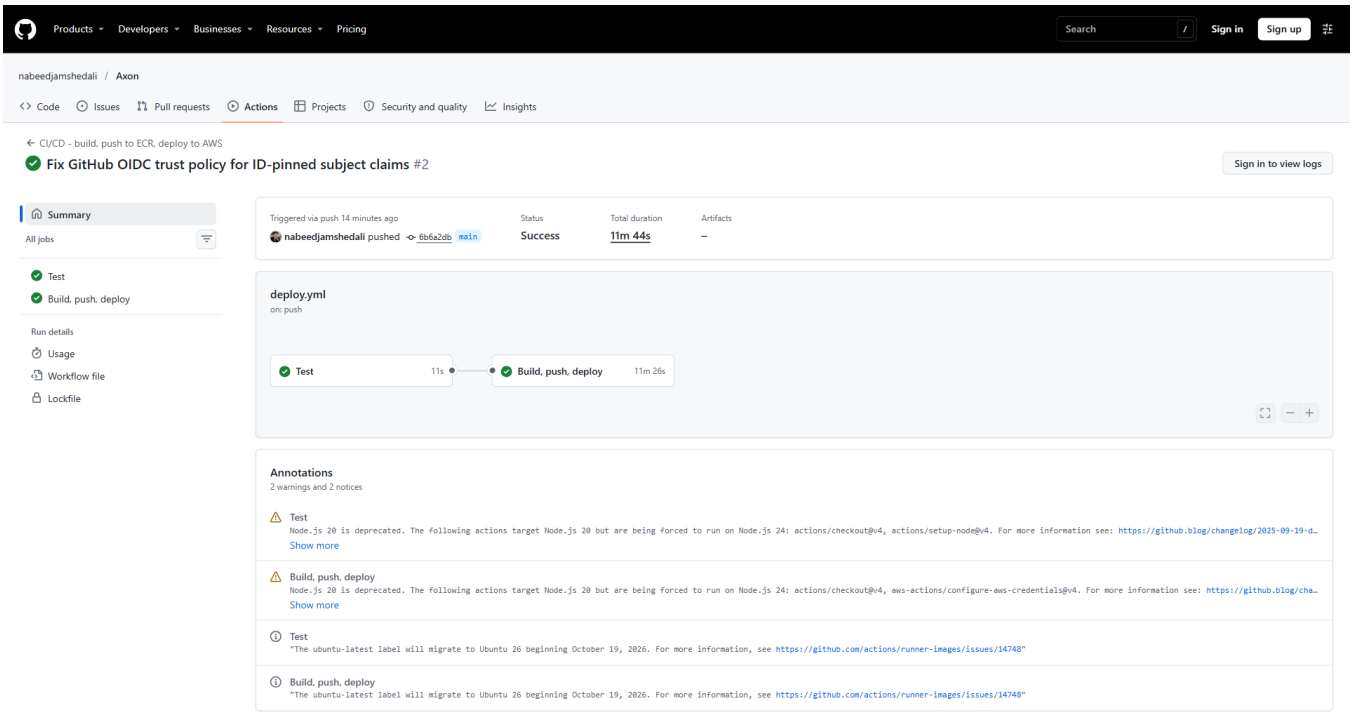

Figure 21: Successful GitHub Actions run: Test and Build, push, deploy.

Running application

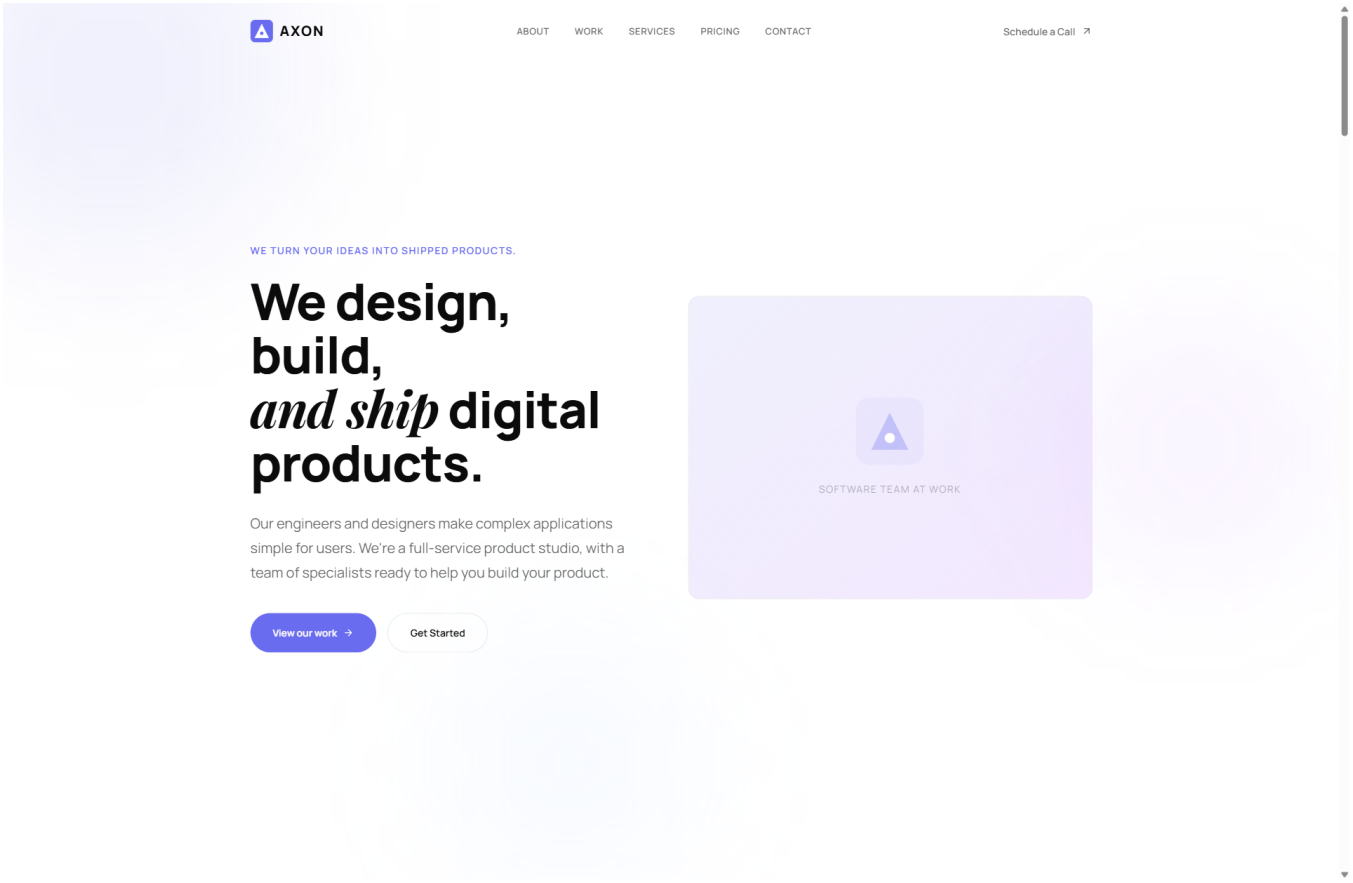

Figure 22: Application served through the public ALB.

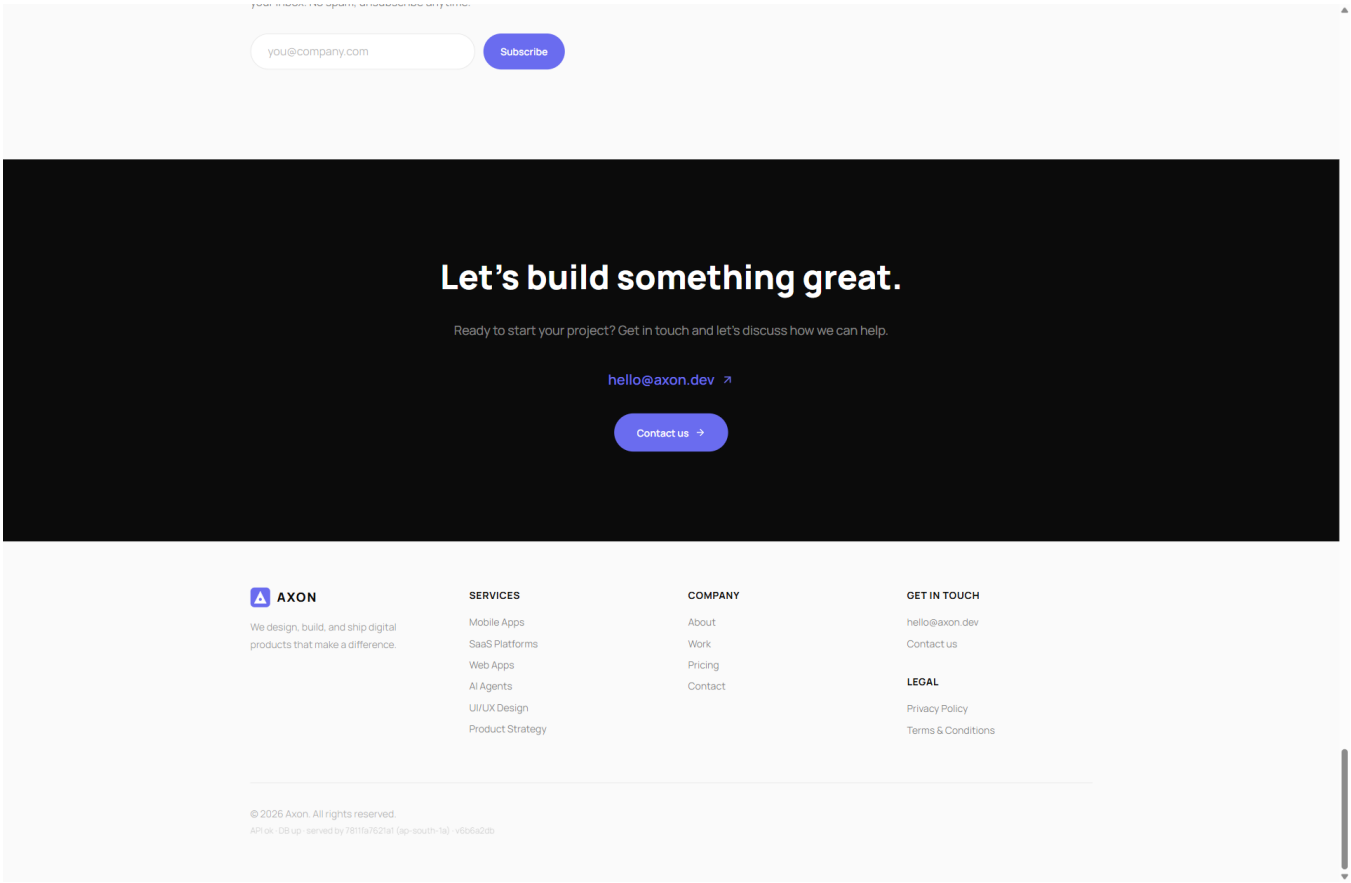

Figure 23: Footer status line: API ok, DB up, serving instance, AZ and deployed commit.

Additional cloud-native enhancements

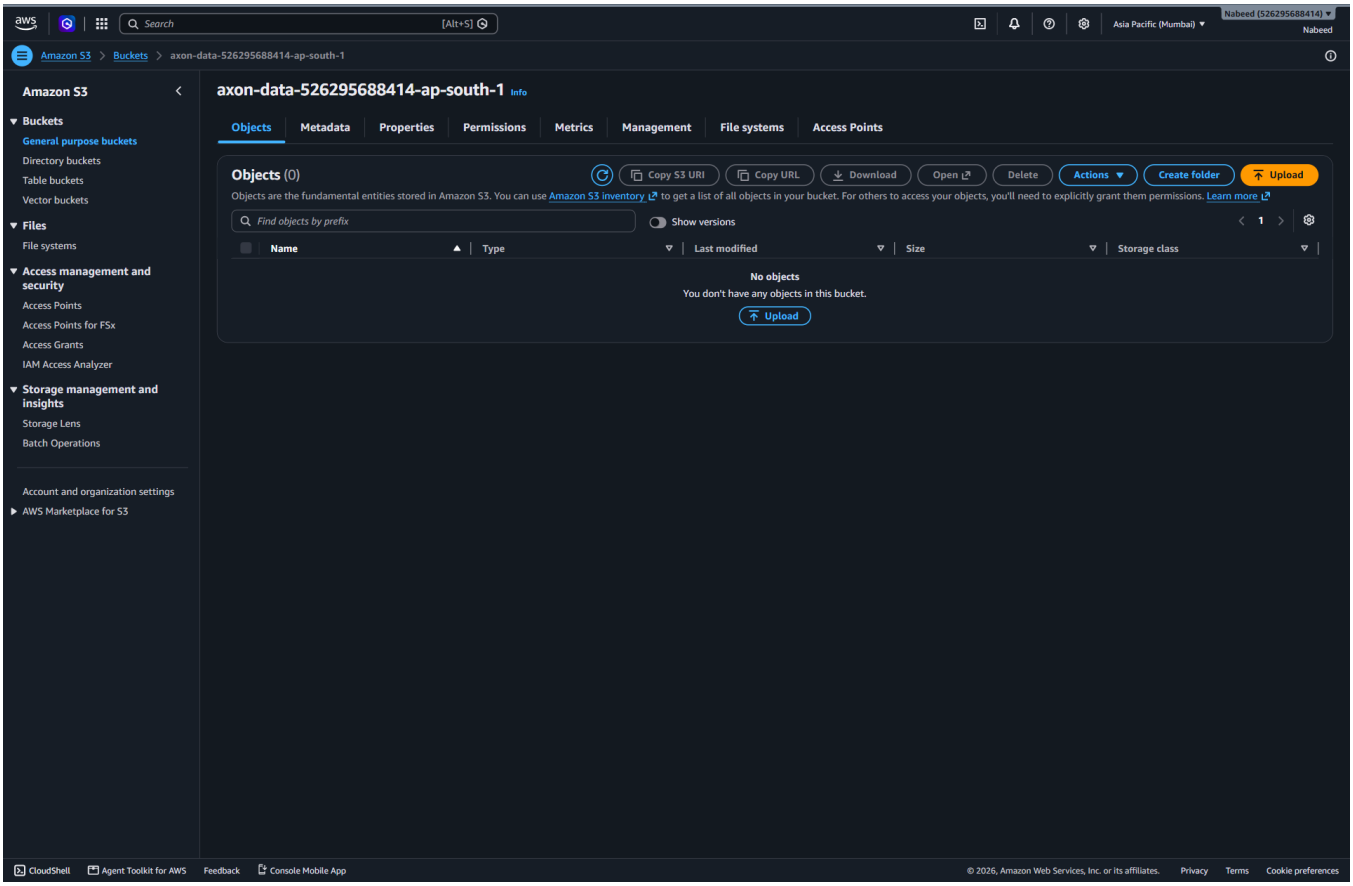

Figure 24: S3 bucket for contact submissions (encrypted, private).

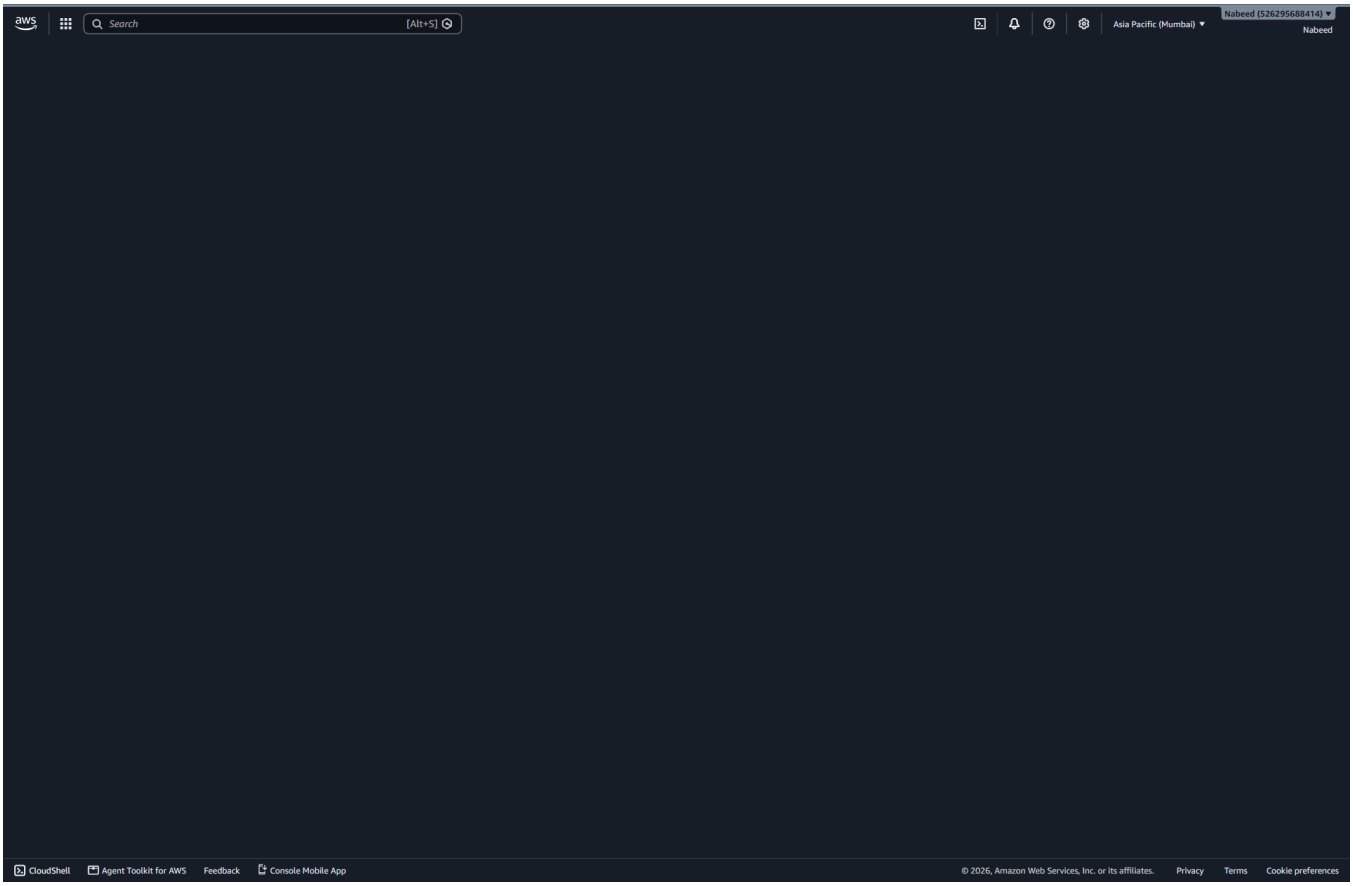

Figure 25: CloudWatch dashboard.

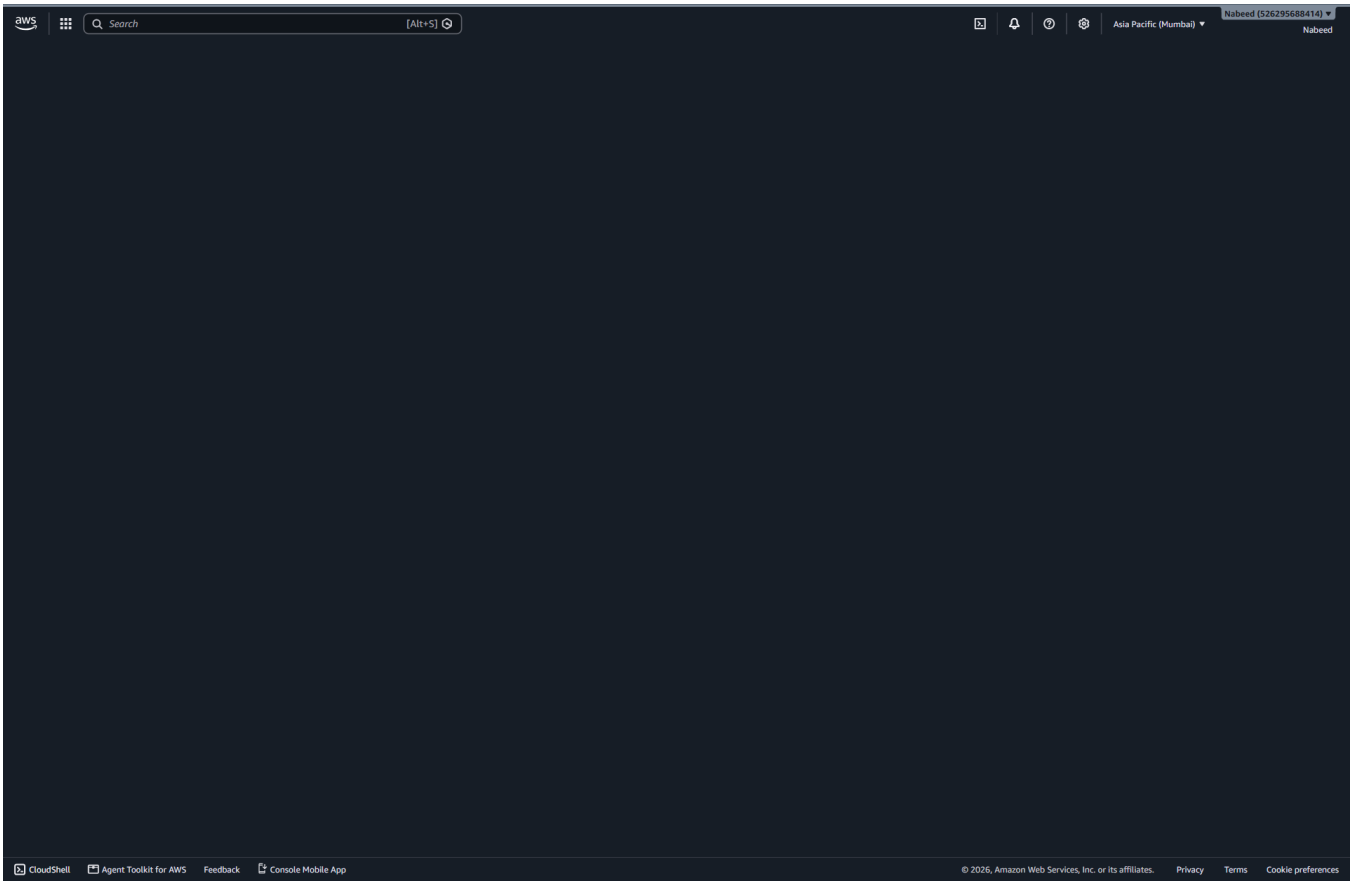

Figure 26: CloudWatch log groups for web and API containers.
